TEMULOI. 155:3946.3954(1995).

-!- FUNCTION: IL-6 is a cytokine with a wide variety of biological functions: it plays an essential role in the final differentiation of B-cells into Ig-secreting cells, it induces myeloma and plasmacytoma growth, it induces nerve cells differentiation, hepatocytes it induces acute phase reactants (By similarity).
-!- SUBCELLULAR LOCATION: Secreted.
-!- SIMILARITY: Belongs to the IL-6 superfamily.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    14 FSLGLILVLPPAAFPAPVLPGEDSKNVAAPHSQPLTSSERIDKHIRYILDGISALRKETCN

"Cloning and expression of interleukin 6 gene from Landrance x Meishan hybrid swine.";

"Cloning and expression of interleukin 6 gene from Landrance x Meishan Submitted (SEP-2000) to the EMBL/GenBank/DDBJ databases.

-! FUNCTION: IL-6 is a cytckine with a wide variety of biological functions: it plays an essential role in the final differentiation of B-cells into IG-secreting cells, it induces myeloma and plasmacytoma growth, it induces nerve cells differentiation, in hepatocytes it induces acute phase reactants.

-!- SUBCELLULAR LOCATION: Secreted.

-!- SIMILARITY: Belongs to the IL-6 superfamily.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                MEDLINE-91338547; PubMed-1873476; DOI=10.1016/1043-4666(91)90494-X; Richards C., Sakharvala J.; Molecular cloning and sequence of porcine interleukin 6 cDNA and expression of mRNA in synovial fibroblasts in vitro.";

"Cloning and expression of equine interleukin-6.";

Submitted (JAN-1998) to the EMBL/GenBank/DDBJ databases.

-!- FUNCTION: IL-6 is a cytckine with a wide variety of biological functions: it plays an essential role in the final differentiation of B-cells into Ig-secreting cells, it induces myeloma and plasmacytoma growth, it induces nerve cells differentiation, in hepatocytes it induces acute phase reactants (By similarity).

-!- SUBCELLULAR LOCATION: Secreted.

-!- SIMILARITY: Belongs to the IL-6 superfamily.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        16 IGLILVMATAFPTPLPLGEDETTSNGPLLTTADKTKQHIKYILGKISALKNEMCNNFSKC

FUNCTION: IL-6 is a cytokine with a wide variety of biological functions: it plays an essential role in the final differentiation of Buctions it plays an essential role in the final differentiation plasmacytoma growth, it induces nerve cells differentiation, in hepatocytes it induces acute phase reactants.
SUBCELLULAR LOCATION: Secreted.
SIMILARITY: Belongs to the IL-6 superfamily.
                                                                                                                                                                                                                                                                                                                                                                                                               TISSUE-Lymphocytes;

The interleukin-6 (IL-6) fragment and protein AAW23944 can be used to detect antibodies and antibodies can be used to detect IL-6. This can be used for the diagnosis of HHV8 infection or associated diseases such as Kaposi sarcoma or Kidney cell carcinoma. Antibodies, proteins and the gene sequence can all be used in the treatment of infections and diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Viral interleukin-6 produced recombinantly from human herpes virus 8 DNA - and related nucleic acid and antibodies, used for diagnosis and treatment of herpes 8 infection or related diseases, e.g. Kaposi sarcoma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      interleukin-6; IL-6; human herpesvirus 8; HHV8; shotgun-cloning; Antibodies; diagnosis; treatment.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This invention relates to mammalian cytokine interleukin-B30 (IL-B30) polypeptides. Host cells containing a vector comprising the IL-B30 mucleic acids are used for the recombinant production of the proteins.

The polymucleotides are useful for diagnosis of IL-B30 mediated conditions, and forensic science (e.g. to distinguish rodent from human, or as marker to distinguish between different cells exhibiting fiderential expression or modification patterns). The IL-B30 (including fragments), together with antibodies that bind to IL-B30 are useful for teaching purposes. They are also used for treating conditions associated with abnormal physiology or development, including inflammatory conditions. The polypeptide cytokine should mediate cytokine synthesis and proliferation in cells. IL-B30 is useful for drug screening to identify compounds having binding affinity to IL-B30. The present sequence represents a Kaposis's sarcoma herpes virus IL-6. (Updated on 27 AUG-2003 to correct OS field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Newly isolated or recombinant polynucleotide encoding mammalian cytokine interleukin-B30 (IL-B30), including fragments - useful for regulating activation, development, differentiation and function of various cell types, and for diagnosing and treating conditions associated with IL-B30.
                                                                                                                                                                                                                                                                                                                                                                                                             Cytokine; interleukin-B30; IL-B30; forensic science; cell proliferation; inflammatory condition; drug screening; human; IL-6.

The sequence represents a novel human herpesvirus 8 (HHV-8) interleukin-

6. The invention claims for novel genes, which includes the viral

contentiatin-6 gene, found at the divergent Di-B locus HHV-8 divergent

clocus Di-B lies between open reading frames 11 and 17. Sequencing of the

HHV-8 divergent locus Di-B revealed the presence of nine viral ORFs with

CC HHV-8 divergent locus Di-B revealed the presence of nine viral ORFs with

CC HHV-8 divergent locus Di-B revealed the presence of nine viral ORFs with

CC AAW40101), Bcl-2 homologue (AAW40102), dibydrofolate reductase (DHFR, see

CC AAW40101), Bcl-2 homologue (AAW40102), dibydrofolate reductase (DHFR, see

CC AAW40101), Bcl-2 homologue (AAW40102), IE-1A (AAW40105)

CC and, four cytokines which include viral interleukin-6 (VIL-6), viral

macrophage inhibitory protein (VMIP)-1A (AAW40104) and -1B (AAW40105)

CC beta-chemokine-like (BCK, AAW40106) protein. The invention claims the

CC mentioned proteins and a polymucleotide containing HHV-8 genes encoding

CO mentioned proteins and polymucleotide containing that the

CC using antibodies to the proteins way be used directly or indirectly, e.g.

CL using antibodies and the proteins way be used directly or indirectly, e.g.

CL using antibodies containing compounds for divise to treat HHV-8

CL claimed to be useful in screening compounds for drugs to treat HHV-8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Alty based large cell lymphoma (BCBL). The proteins have also been to be useful in screening compounds for drugs to treat HHV-8 s. (Updated on 27-AUG-2003 to correct OS field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New human herpes virus gene region containing 8 open reading frames -

This is the amino acid sequence of the kaposi sarcoma herpes-like virus/interleukin-6, used in the method of the invention. In this method, an antiviral agent effective against Kaposi sarcoma herpes-like virus (KSHV), is used to prevent progression of MGUS to multiple myeloma or related malignancy. KHSV- and/or interleukin-6 related disorders such as specifically Alzheimer's disease, multiple sclerosis, rheumatoid arthritis, systemic lupus erythematosus, scleroderma and malignancies of kidney or head/neck. The vaccines (comprising a KHSV-specific immunogen) is used to produce a therapeutic and/or prophylactic response
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                PAC3; interleukin-6; IL-6; inhibitor; IL-6-inhibitory; lymphoma; leukaemia; myeloma; carcinoma; sarcoma; chronic inflammation; bacterial; viral infection; osteolysis; degenerative disease;
                                                                                                                                                                          Treatment of multiple myeloma and monoclonal myopathy with antiviral agent - active against Kaposi sarcoma virus, or with inhibitory nucleic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New protein PAC3, useful for treating cancers, is an inhibitor interleukin-6, also related peptides, nucleic acid, antisense oligonucleotides and transformed cells.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The interleukin-6 (IL-6) and protein AAW23945 derived from the sequence can be used to detect antibodies and antibodies can be used to detect IL-6. This can be used for the diagnosis of HHV8 infection or associated diseases such as Kaposi sarcoma or kidney cell carcinoma. Antibodies, proteins and the gene sequence can all be used in the treatment of infections and diseases as mentioned above
                                                                                                                                                                                                                                                                                                                                                                                                                            Viral interleukin-6 produced recombinantly from human herpes virus 8 DNA - and related nucleic acid and antibodies, used for diagnosis and treatment of herpes 8 infection or related diseases, e.g. Kaposi sarcoma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Kaposi sarcoma herpes-like virus/interleukin-6; PCR; primer; antiviral agent; multiple myeloma; vaccine; rheumatoid arthritis; monochonal gammopathy of undetermined significance; MGUS; malignant; interleukin-6; Alzheimer's disease; multiple sclerosis; scleroderma; systemic lupus erythematosus; amplification.

and the properties of the control of the nucleic acid; antisense and codes PAC3 or the fragments of the nucleic acid; antisense coligonucleotides that block transcription or translation of PAC3 or its fragments, able to hybridize to the PAC3 coding nucleic acid; a transcenic, non-human animal that expresses a transgene for PAC3 or its fragments; an expression vector containing PAC3 coding nucleic acid and expression elements; and microorganisms or host cells transformed with the vector containing the PAC3 coding nucleic acid and expression the vector containing the PAC3 coding nucleic acid and expression clements. The PAC3 protein, and its active fragments, are used to treat lymphoma, leuksemia, myeloma, carcinoma and sarcoma, other conditions induced by, or associated with, overexpression of interleukin-6, e.g. chronic inflammation, bacterial or viral infections, osteolysis in codes PAC3 can be used for recombinant production of the protein and to prepare transgenic animals, useful as models for studying, in vivo, prepare transgenic animals, useful as models for studying, in vivo, excessive expression of the PAC3 coding nucleic acid, or its truncated or mutated forms. This sequence represents a human PAC3 protein of the
                                                                                                                                                                                                       The invention relates to a novel protein, PAC3, which inhibits interleukin-6 (IL-6) and has a 125 amino acid sequence, given in the specification. The invention further relates to: peptide fragments of PAC3 with IL-6-inhibitory activity, formed by addition, suppression and/or replacement of one or more amino acids, a nucleic acid that
interleukin-6, also related peptides, n
oligonucleotides and transformed cells.

(COMP-) COMPUGEN LTD

New protein PAC3, useful for treating cancers, is an inhibitor of

```
The sequence represents an angiotensin converting enzyme splice variant (ACEV) polypeptide. The polypeptides of the invention include variants of granulocyte colony stimulating factor receptor, glucagon, interleukin 6, platelet-derived endothelial cell growth factor, cyclin-dependent kinase inhibitor 1C, cellular tumour antigen P53, and vasoactive intestinal polypeptide receptor 2. The polypeptides and their associated nucleic acidis are useful for identification of variant sequences and detection of candidate compounds capable of binding the molecules. The sequences of the invention can be used in the treatment and diagnosis of various candidate compounds castaler diseases such as arteriosclerosis, myocardial infarction and coronary arterial thrombosis, renal diseases such as diabetic nephropathy, muscular diseases such as hypertrophy, immune disorders such as immune complex nephritis, multiple sclerosis, cancer, sarcoidosis, nonarcoidotic pulmonary granulomatous diseases such as asbestosis and vascular pathologies involving an endothelial
                                                                                                                              Novel alternative splicing variants e.g. variant of angiotensin converting enzyme (ACEV), useful in identifying candidate compounds capable of binding to the variant and to detect anti-variant antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         59.2%; Score 61; DB 4; Length 148; 57.9%; Pred. Protein structure analysis comprising measuring a fragmented spectrum, determining classification information, determining information about an easily cut off region, estimating the stereostructure of the protein and outputting results.

```
The present invention describes a protein structure analysis method comprising measuring a fragmented spectrum by dividing the target protein into several segments, determining the classification information of the segmented ion corresponding to the amino acid sequence based on the segmented ion corresponding to the amino acid sequence based on the segmented location, estimating the stereo classification based on the segmented location, estimation data and structure of the protein, and outputting result of estimation data and easy cut off region information. Also described: (1) a similar method wherein before estimating the stereo structure, residual solvent information; (2) a similar method wherein a composite of a protein and a compound is fragmented, and before estimating the stereo structure the information of mutual effect of the protein and /or compound is compound of mutual effect of the protein and /or compound is determined; (3) apparatus for carrying out the above methods; and (4) programs for carrying out the methods can be used for genetic analysis. The present sequence represents an MB-2 amino acid sequence, which is used in an example from the present invention.

WPI; 1995-325556/42.

N-PSDB; AAQ94346

Interleukin-6 mutant, related DNA and expression vectors - has higher stability than natural interleukin-6.

Claim 1; Page 14; 18pp; Japanese.

AAQ94346 encodes AAR77391 the human IL-6 deletion mutant IL-6a'Cl, which lacks the amino acids G195-Leu19 and Cys44-Cys50 of the wild type protein. The CDNA can be used for the recominant prodn. of IL-6a'Cl, which has increased stability compared to wild type IL-6

The invention relates to a computer system comprising computer hardware and model of interleukin (IL)-6 structure, where the model has data set representing phasing statistics for the native crystal, root mean square (RMS) deviations from experimental distance restraints (Angstrom), RMS deviations from idealised covalent geometry, energetics, interhelical and kink angles and interhelical distances, residues conserved among 9 species of IL-6, as given in specification. Also included are identifying a species which is an agonist or antagonist of IL-6 activity or binding using the computer system, an agonist or antagonist species identified by above mentioned method and identifying a substance that inhibits or mimics IL-6 activity or binding, using the computer system. Il-6 is a cytokine involved in bone homeostasis. Increased levels of IL-6 have been correlated with Paget's disease and multiple myeloma. IL-6 is a lso

Crystalline human interleukin-6, useful for identifying IL-6/IL-6 receptor interactions, and for identifying agonists and antagonists of such interactions, has diffracting crystals of a specific space group.

Disclosure, SEQ ID NO 4; 30pp; English

The invention relates to crystalline human interleukin-6 (IL-6). The crystalline form of IL-6 is useful for identifying IL-6/IL-6 receptor interactions, and for identifying agonists and antagonists of the interactions. Crystalline IL-6 structure enables effective study of its interactions with its receptor. The present sequence represents the amino acid sequence of rhesus monkey interleukin-6, IL-6.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 2

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        nonhuman primates.,;
J. Immunol. 155:13946-3954(1995).

-!- FUNCTION: IL-6 is a cytokine with a wide variety of biological
-!- FUNCTION: it plays an essential role in the final differentiation
of B-cells into Ig-secreting cells, it induces myeloma and
plasmacytoma growth, it induces nerve cells differentiation, in
hepatocytes it induces acute phase reactants.
-!- SUBCELLULAR LOCATION: Secreted.

MEDLINE=99; POINTION: The first implications for a novel and effections: it plays an essential role in the final differentiation of B-cells into Ig-secreting cells, it induces myeloma and plasmacytoma growth, it induces nerve cells differentiation, in hepatocytes it induces acute phase reactants.

                                                                                                                            -I-FUNCTION: IL-6 is a cytokine with a wide variety of biological functions: it plays an essential role in the final differentiation of B-cells into IG-secreting cells, it induces myeloma and plasmacytoma growth, it induces nerve cells differentiation, in hepatocytes it induces acute phase reactants (By similarity).
-!- SUBCELLULAR LOCATION: Secreted.
-!- SIMILARITY: Belongs to the IL-6 superfamily.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

                FUNCTION: IL-6 is a cytokine with a wide variety of biological functions: it plays an essential role in the final differentiation of B-cells into Ig-secreting cells, it induces myeloma and plasmacytoma growth, it induces nerve cells differentiation, in heparocytes it induces acute phase reactants (By similarity). SubCELLULAR LOCATION: Secreted.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;

"Cloning and expression of equine interleukin-6.";

Submitted (JAN-1998) to the EMBL/GenBank/DDBJ databases.

-!- FUNCTION: IL-6 is a cytokine with a wide variety of biological functions: it plays an essential role in the final differentiation of B-cells into 1g-secreting cells, it induces myeloma and plasmacytoma growth, it induces nerve cells differentiation, in hepatocytes it induces acute phase reactants (By similarity).

-!- SUBCELLUIAR LOCATION: Secreted.

-!- SIMILARITY: Belongs to the IL-6 superfamily.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 MEDLINE-20579380; PubMed-11137120; DOI=10.1016/S0165-2427(00)00241-5; Swiderski C.E., Sobol G., Lunn D.P., Horohov D.W.; "Molecular cloning, sequencing, and expression of equine interleukin-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

Immunogenetics 43:190-195(1996).
C --- FUNCTION: It plays an essential role in the final differentiation
of Bacchis into Ig-secreting cells, it induces myeloma and
plasmacytem growth, it induces nerve cells differentiation, in
hepatcoytes it induces acute phase reactants (By similarity).
C --- SUBCELLULAR LOCATION: Secreted.
C --- SIMILARITY: Belongs to the IL-6 superfamily.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This SWISS-PROT entry is copyright.
